The story

We are proud to share our story, which began back in 1906. Founded as a small artisan workshop, we started out as blacksmiths, a traditional craft that required skill, dedication, and a deep respect for materials and manual work. Since then, while remaining a family-owned and small-sized business, we have grown into a fifth-generation company, preserving the craftsmanship and attention to detail that have always set us apart. Over the generations, our company has adapted to market demands, integrating modern technologies without ever losing sight of the essence

of artisan work. Our experience and passion have allowed us to face the challenges of time, staying true to our roots while always looking to the future. Today, just as in the past, we put our heart into every project, offering tailor-made solutions for our clients with the same care and dedication that our founders applied to their work over a century ago. We are more than just a company: we are a family story that has continued for five generations, with the passion of those who believe that every detail makes a difference.

We build with passion

Meccanica Cremonini is a benchmark in the design and production of motor pumps and electric pumps, destined for a wide range of applications in the agricultural, industrial, and construction sectors. With decades of experience in the field, we also support civil protection and emergency response activities, offering certified and approved solutions designed to withstand the most critical conditions, thanks to the use of high-quality centrifugal and self-priming pumps. Our commitment goes beyond mere production: we manufacture over 90% of the components in-house, ensuring direct control over every phase of the process,

from design to final construction. This allows us to combine the tradition of Italian craftsmanship with technological innovation, developing products that meet the highest quality and regulatory standards. We also offer a complete and prompt after-sales service, ensuring maximum customer satisfaction and a long operational life for our machines. Our mission is to bring the value of Made in Italy to the world, offering custom solutions that stand out for their reliability, durability, and superior performance, while responding flexibly to the demands of an ever-evolving market.
